Jeffrey N. Denenberg has more than 50 years of experience in the electronics, communications, and computer industries. He has worked as an engineer for Warwick Electronics, Motorola and Bell Telephone Laboratories, as an engineering manager for ITT and Prodigy Services Co., and as the Chief Technology Officer for Noise Cancellation Technologies. He is currently president of DTS, a technology-consulting firm that specializes in resolving system and product design issues.

Dr. Denenberg has also been active in engineering education, teaching graduate and undergraduate engineering and computer science courses at Connecticut universities (Fairfield, UNH, SHU, and UB) for over 25 years as well as mentoring the MGI PE-Power refresher course for the past 20 years.

He received his BS from Northwestern University in 1966 and both an MS and Ph.D. from the Illinois Institute of Technology in 1968 and 1970 respectively, all in Electrical Engineering. Dr. Denenberg holds 20 patents covering a wide variety of technical areas. These include: active noise cancellation, digital signal processing, data compression, voice and data communication systems, network architecture, parallel processing, fault tolerant systems, pattern recognition, and consumer electronics. Dr. Denenberg has published many technical papers and has been a contributing author for two books. He is a Senior Life Member of the IEEE.
